Mass and energy are related by $E = mc^2$ in special relativity.
Each term satisfies $x_i + y_i = z_i$ for every index.
The test rejects when $\alpha \le \beta$ holds for the sample.
A circle of radius r has area πr^2, as is well known.
This was first reported by Okafor[3] and later confirmed.
The meeting is planned for the 21st of March.

$$\sigma^2 = \Sigma_k (x_k - \mu)^2$$

Ordinary closing sentence without any mathematics at all.
